**The City of New York  
Manhattan Community Board 8**

**DEP Service Advisory**

Because of scheduled water system operations conducted by the Department of Environmental Protection, the Croton Water Supply has been activated and is delivering water to specific areas throughout New York City. Residents may have discolored tap water due to shifting sediments in the water main as portions of the distribution system are activated. Possible dark water anticipated in areas of Community Boards 4,6,7,8,9,10 and 11. This water is safe to drink and does not require boiling, but washing clothes with discolored water may tint or stain garments. If sediment is present in the water, let it settle before drinking.
